

Program and output format for PHP Programming BAIL358D

Printed output page
Black and white print is okay,
and front back when user input, is okay

Ruled

Please use [0_3_output_template.php](#) (and [0_3_output_template.html](#) if user input is expected) to generate output, print to pdf, and take print out

or

use Open/Libre Office's Writer
(Microsoft Office Word equivalent)

to create docx/odt

and include the same fields,
in same format

as it is in [0_3_output_template.php](#) (and [0_3_output_template.html](#))

example:

USN: YourUSN (right)

Date: Day Month Year (right)

PHP Programming BAIL358D (center)

Experiment Number. Problem statement (left)

Output: (center)
if you have used [0_3_output_template.php](#) (and [0_3_output_template.html](#)) to generate output

hence output of form or PHP will be here

or

if you are using Open/Libre Office's Writer for saving output of program,
then include the screen shot (print screen shortcut on keyboard) of Mozilla Firefox with output and then

docx/odt → pdf → print out

PHP Programming BAIL358D
Experiment Number. Problem statement
If problem definition expects user input, then
only the form element markup of html
markup_file_name.extension
form markup
PHP Program
program_name.extension
program
If program does not fit on the same page, please
use/write the/on the back side blank page,
please do not add a new ruled/blank page

back side blank page
Continue program on the back side blank page
